

EXPLANATION OF PROFESSIONAL FEES

MENU OF SERVICES

CONSULTATION: No Charge

The consultation takes place subsequent to the New Patient History Examination. The Doctor will discuss with the patient any current complaints. The Doctor will also give the patient a brief explanation of Chiropractic and the care they will be receiving.

CHIROPRACTIC EXAMINATIONS:

New Patient History Examination:

The Doctor or a Chiropractic Assistant will take a case history on the new patient, which involves questions regarding their past and present health complaints. The Doctor or Chiropractic Assistant will also perform various ranges of motion tests, and occasionally a hand dynamometer test.

Brief Examination:

The Doctor questions the patient as to their current subjective status. The Doctor also performs several examinations: prone and supine leg length differential test, Derifield leg check, Ely's test, Thompson test, Sacral leg check, spinal motion palpitation and cervical syndrome tests, to determine the patient's objective status. Based upon the Outcome Assessment, the doctor will determine whether the patient requires a corrective adjustment on that visit.

Established Patient History Examination:

Subsequent to each 15th visit a Chiropractic Assistant will perform various ranges of motion tests, and occasionally hand dynamometer tests. The Doctor will then perform several Chiropractic Tests so that he may evaluate the patient's progress.

CHIROPRACTIC X-RAY STUDIES:

Subsequent to the Consultation and after careful review of the patient's complaints, the Doctor will determine if x-rays are necessary for the proper care of the patient.

DOCTOR /PATIENT CONFERENCE:

The Doctor/Patient Conference is a specific office visit at which time the Doctor relays to the patient their examination findings; i.e. physical examination, x-ray examination study. Therefore, educating the patient's understanding and encouraging participation in their health findings and care.

CHIROPRACTIC ADJUSTMENT:

The Chiropractic Adjustment is the correction (reduction) of a subluxated vertebra or pelvic segment by means of making specific, predetermined adjustments. The Chiropractic Adjustment is made only after careful analysis, delivered in a specific manner, to achieve a predetermined goal.

DIAGNOSTIC TESTING:**Range of Motion Examination:**

The Doctor or Chiropractic Assistant will perform a digital range of motion exam to assess patient impairment or progress in function. A computer-generated report will be discussed with the patient.

Muscle Testing:

The Doctor or Chiropractic Assistant will perform specific digital muscle testing to determine neurological balance and function.

MODALITIES:**Mechanical Traction:**

A modality used to assist the body in repositioning misaligned joints by use of pelvic blocks, cervical rolls or pads.

Manual Therapy:

Performed by hand to release myofascial trigger points and relax hypertonic musculature.

Neuromuscular Re-Education:

Specific movements and exercises, performed with Doctor or Chiropractic Assistant supervision, to enhance muscular and neurologic coordination.

Kinetic Activity:

Dynamic joint movement applied to the patients joints encouraging and restoring motion.

Daily Living Activity Training:

Education and supervision of daily activities to maximize and maintain the healing process and limiting excessive stress.

Electrical muscle stimulation:

To stimulate muscle contraction in order to break muscle spasm and tissue adhesions.

Therapeutic Exercises:

Specific exercises performed with the Doctors supervision to promote, muscle strength and balance. To the spine and extremities.

Percussor-Chi Infratonic:

Vibratory percussor or the chi infratonic machines are used to initiate vibration into specific areas of the spine or extremities. This modality is used to assist the body in facilitating healing to hypomobile joints and neurologically dysfunctional tissues.
